

# CONTROLLING THE MOTOR

## FOR THE USER

With a single click from a portable remote control or wall-mounted transmitter the Libart Retractable Roof responds with single or groups of bays opening, closing or perhaps somewhere in between!

The SOMFY Telis 1 RTS is a stylish, easy to use remote control. The "my" button feature enables the user to store a favourite opened position of the retractable roof. It has a 200 metre range and up to 20 metre range through two reinforced concrete walls.

## AUTOMATED FUNCTIONALITY

The SOMFY range of rain, wind and sun sensors takes the control of your roof to whole new dimension. Reliable and precise, these sensors detect the weather conditions and manage the roof movement to the detected weather and environmental conditions.

In a practical situation, the Ondeis rain sensor will assist in avoiding accidental rain damage if the roof is inadvertently left open. Upon "sensing" rain the Libart Retractable Roof will close automatically.
